King's College London

About London

London, England's capital, is the most populous and wealthiest city of Great Britain. It offers a cosmopolitan mixture of different cultures and traditions. Students can find an endless list of world-class museums, monuments, buildings, churches and historical sites. London is also well known for its food, clothing and flower markets across the city.

The areas of Piccadilly and Leicester Square offer many opportunities to experience London's theaters, and students can purchase discount tickets to many of the productions. Other famous sights include the Tower of London, Shakespeare's Globe Theater, the London Eye, Buckingham Palace, and St. Paul's Cathedral.

London is also at the heart of the world's financial markets. It has a high concentration of international expertise and capital, and it has a great legal and regulatory system to support it.

About the University

King's College London is one of England's oldest and most prestigious university institutions: a multi-faculty research-led university college based in the heart of London with over 19,700 students, of whom more than 6,200 are postgraduates. It is ranked as one of the world's top 25 universities.

The College offers an intellectually rigorous environment supported by welcoming and caring traditions. King's has played a major role in many of the advances that have shaped modern life, such as the discovery of the structure of DNA, and it is now the largest centre for the education of doctors, dentists and other healthcare professionals in Europe and home to five Medical Research Council centres.

King's location in the heart of London and its strength in law, humanities and the social sciences make it a major player in forging links between the arts, culture and universities, and in the development of public policy at national level. Its very broad range of subjects, including also physical sciences and engineering, are increasingly inter-related, notably in fields such as bioinformatics, health policy and medical humanities.

Program Benefits

- **An unrivalled reputation:** King's has played a major role in many of the advances that have shaped modern life; from the pioneers of modern day nursing to the discovery of the structure of DNA.
- **Academic excellence:** 24 subject areas have been awarded the highest rankings for quality of research, demonstrating excellence at an international level.
- **An enriching academic experience:** over 800 courses that cover the arts, health sciences, humanities and social sciences.
- **Unbeatable location:** our campuses are minutes away from London's theatres, concert halls, national museums, seats of law and government, national libraries and major academic institutions.
- **Innovative programs:** from the chance to study at Shakespeare's Globe, intern opportunities at leading research organizations through to our Pre-Medical program.
- **Full integration:** you will go to the same lectures, seminars and labs as all other students.
- **Support and guidance:** a full cycle of support is available from a welcome orientation through to individual Study Abroad advisors in each department.
