CLINICAL LABORATORY SCIENCE (August 2006; Revised June 2010)
At the completion of the Clinical Laboratory Science major, the graduate is able to:

1. Demonstrate entry-level knowledge of clinical laboratory science.

2. Analyze human biological specimens according to established protocol for accuracy and precision for each scientific discipline within the clinical laboratory.

3. Effectively communicate the results of scientific analysis to professional colleagues.

4. Exhibit values consistent with ethical clinical laboratory science practice.
