Provide an example of the program’s most interesting or important assessment finding that demonstrates the program’s success associated with a program learning outcome.

100% of assessed MS students met the three program learning outcomes: Demonstration of critical thinking skills, technical proficiency in at least one area of Biomedical Engineering, and critical evaluation of the application of scientific methods in addressing Biomedical Engineering problems.

Describe an assessment result that indicates an opportunity for improvement and identify the specific actions the program will take to improve student learning.

88% of students were assessed as adequate or strong in communicating of technical information appropriately for audience. To improve student performance in this area we will devote one graduate student seminar to this topic, incorporating a speaker from the writing center to describe their services and provide an overview on writing strategies.
