Provide an example of the program’s most interesting or important assessment finding that demonstrates the program’s success associated with a program learning outcome.

Practicing engineers evaluate our seniors on the projects that they complete in the senior design course. They report that our students exceed their expectations in all of the learning outcomes being addressed. Our students perform at or above the national average on the Fundamentals of Engineering examination.

Describe an assessment result that indicates an opportunity for improvement and identify the specific actions the program will take to improve student learning.

The program will look at ways of assessing more specific outcomes in the oral and written portions of the senior design course. The use of individual scores rather than group scores will be investigated.
