Provide an example of the program’s most interesting or important assessment finding that demonstrates the program’s success associated with a program learning outcome.

Students in the doctoral program in clinical psychology are given formative feedback throughout their tenure in the program, and if they are having problems with any specific competence they are provided remediative steps. As a result, when students apply for permission to attend internship, they have already been rated as minimally competent in all relevant areas. Thus, all of our students meet or exceed expectations for competence in all of the 11 competencies we regularly evaluate.

Describe an assessment result that indicates an opportunity for improvement and identify the specific actions the program will take to improve student learning.

The program is strongly encouraging students to publish articles and make professional conference presentations. Students have responded well to this encouragement, and we expect that the rate of publications and presentations will continue to increase in the future.
