Provide an example of the program’s most interesting or important assessment finding that demonstrates the program’s success associated with a program learning outcome.

Of the 12 students who were evaluated under learning outcome #1 (focused on theory and research), 9 were "proficient" or "advanced" on all six criteria, and 11 were "proficient" or "advanced" on four of the six criteria.

Of the 13 students who were evaluated under learning objective #2 (focused on theories and problems in their specializations), 12 were "proficient" or "advanced" on all three criteria.

Describe an assessment result that indicates an opportunity for improvement and identify the specific actions the program will take to improve student learning.

There are two areas where we would like to see some improvement. First, all of the students posed research questions and/or hypotheses in their answers to the research/theory question, but several of these were too ambiguous to serve as the foundation for their proposed study. Second, even though all but one student specifically addressed the ethical questions presented by their proposed research, several students provided only a cursory examination or elucidation of these issues.
