Provide an example of the program’s most interesting or important assessment finding that demonstrates the program’s success associated with a program learning outcome.

We concluded that by the time our students complete the program they are capable of identifying practical economic, business, or policy problems and use proper econometric techniques to analyze them. They are also able to present their finding in technical and non-technical terms and successfully defend them.

Describe an assessment result that indicates an opportunity for improvement and identify the specific actions the program will take to improve student learning.

We will continue providing our students with direction as to the type of economic, business, or policy problems they should identify, the sources, nature, and limitations of data they need to quantify these problems, and the proper quantitative techniques that must be used for solving such problems. We will also continue emphasizing the importance of communicating the results of their analysis orally and in writing to technically-oriented and non-technical audiences.
