Provide an example of the program’s most interesting or important assessment finding that demonstrates the program’s success associated with a program learning outcome.

The department was satisfied with the general findings of our student performance. The department wants to determine whether the findings of the last two assessments are indeed representative of the difficulty in mastering the "marginal decision making" learning outcome, or if the measure was inadequate given its quantitative structure.

Describe an assessment result that indicates an opportunity for improvement and identify the specific actions the program will take to improve student learning.

The assessment of the "marginal decision making" learning outcome will be conducted again in the Spring 2011. This will allow the regular rotation of learning outcomes assessed in Intermediate Microeconomics to continue. Specifically, in Spring 2011, the department will assess the learning objective "Analyze the operation of markets under varying competitive conditions".
