Provide an example of the program’s most interesting or important assessment finding that demonstrates the program’s success associated with a program learning outcome.

Many students participated in our educational outreach activities (on a variety of health issues) throughout '09-'10 academic year. Of those students who participated, over 50% indicated they would either change behavior or think about changing behavior as a result of attending the educational program. As a department we are pleased with the result and look forward to increasing and expanding that percentage.

Describe an assessment result that indicates an opportunity for improvement and identify the specific actions the program will take to improve student learning.

73% of students on the Junior survey indicated they had used Student Health Service. Of those students, a little over 30% indicated that their use had either markedly or moderately improved their ability to manage their health needs. As a department we see this as a huge opportunity to continuously educate the students we see and work with them to take an active role in their health and health care needs.
