BIOLOGICAL SCIENCES (August 2006)

Biology, Biochemistry and Molecular biology (biology portion), Human Biology, Physiological Sciences

At the completion of a Biological Sciences major, the graduate is able to:

1. Demonstrate a breadth of knowledge in biology, with a deeper understanding in specific areas of interest.

2. Apply knowledge of scientific methods and experimental design to solve biological problems.

3. Use critical thinking skills in analyzing biological data, demonstrated through written and/or oral presentations.
