

Brain Dissection and Neuroscience: Applications to Disorders of Language and Speech Functions

Comments by 2007 participants

Shannon Liem, Tallahassee, FL

"An absolutely outstanding way to marry the practical application and the theoretical knowledge base. I had too many 'a-hah' moments to count!"

Amy Swier-Vosnos, Chicago, IL

"Blunt dissection CHANGED MY PROFESSIONAL LIFE."

Shannon Parnell, Clarksburg, MO

"This was the conference I've been waiting for! (I loved it.) It has been 12 years since I finished my masters. I was ready for a review, plus so much more. Thank you!"

Keri Winchester, Mesa, AZ

"Thank you for a hands on course that has both reinforced and clarified concepts. I leave the course with improved perspective and as a better clinician."

Roberta M. Roy, Port Henry, NY

"A course designed to demystify not only the outer cortex but the inner circuitry and brainstem function in relation to speech and language as well."

Bedonna J. Honda, Orange, CA

"The high quality of both presenters and attendees far surpassed my expectations. The clinical assistants were friendly and knowledgeable. Thank you!"

"Personally, this experience triggered an unexpected awe and respect for the human body."

Patricia Predum, Mount Pleasant, MI

"Courses like this empower the clinician in me. It was great to have so much time spent of Neuroscience in such depth. I've been a clinician for 16 years and this brought back the excitement I felt back in those early years of my profession. Acknowledging the need for the neuroscience information for SLP's in our day to day practice is critical but often overlooked. Thanks for reminding me of the value of "Pathologist" in our title. Congratulations on the success of this program."

Susan Agard, Green Bay, WI

"This program was exceptional. I will definitely use this information in my practice. I received my money's worth on the first day! The next two days were gifts. Thank you very much!"
