

Program Evaluation Notes 2011
Brain Dissection and Neuroscience: Its Application to Communicative Disorders

- The in-depth course work, direct visualization of the brain, and hands on dissection was extremely valuable in advancing my knowledge of neuroanatomy/neuroscience and its application to our field.
 - Jennifer Campbell, Orlando, FL
- It was especially beneficial to hold the brain and manipulate it myself. This greatly aided my appreciation of the structures such as hippocampus and brainstem. Observing and participating in the craniotomy was indispensable to understanding how the cranial nerves travel through the skull. One doesn't typically get exposure to both the brain and the skull simultaneously. This was very helpful!
 -
- A very effective and enjoyable course. Hands-on work in the dissection lab was invaluable.
 - Susan Grama, Port Ranch, CA
- Excellent- beyond expectations.
 - Celena Thompson, Mesa, AZ
- This course was an excellent opportunity to synthesize information regarding structure and function. Very well run.
 - Megan Schliep
- Best hands on anatomy class I've ever had the opportunity to attend-Worth every penny!
 - Barbara Hoopes, Greenville, SC
- Great inter-disciplinary approach to better understand brain anatomy and function to increase most effective treatment and patient plan of care.
 - Amy Ginsburg, Orlando, FL
- Great class! Very informative and helps with increasing understanding of anatomy and function.
 - Kelly Douglass, Roseville, CA
- The information one gathers from this course is unlike anything received through undergraduate or masters level of study. The combination of text, visuals, hands on dissection, and case studies lends itself to provoke thought on complex decision making.
 - Lisa Evangelista, Laguna Hills, CA
- Excellent course, reinforces previously learned information and presents new information well and with good coverage.
 - Tepanta Fossett, Bloomington, IN
