

Cisco VPN client installation – October 2009

This version of the Cisco VPN client is compatible with Mac OS X version 10.4 or newer, including Intel-Macs.

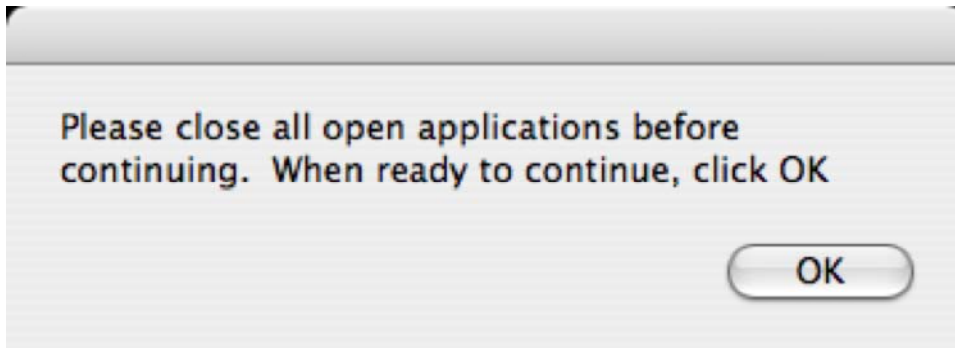

1. Click on the link [Download Cisco VPN for Mac OS X](#)
2. Open downloaded file, **VPN Client 4.9.01.0180.dmg**, then double-click **VPN Client 4.9.01.0180.dmg**
3. Double-Click the **VPN Client 4.9.01.0180** icon

4. To begin installation, double-click **VPN Client Installer 4.9.01.0180**

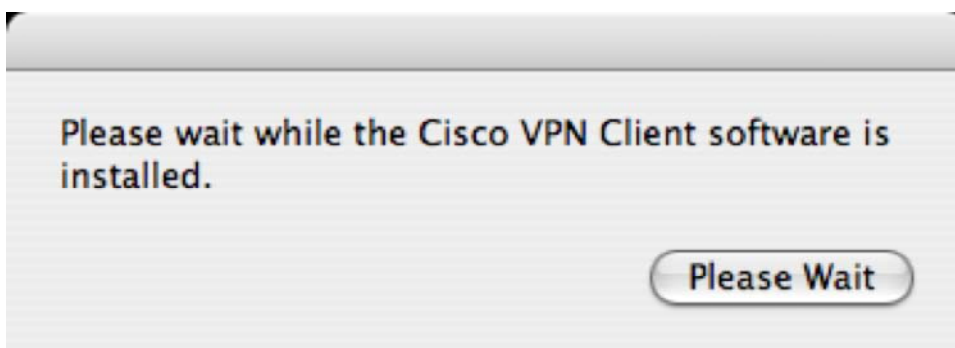

4. Click **OK**

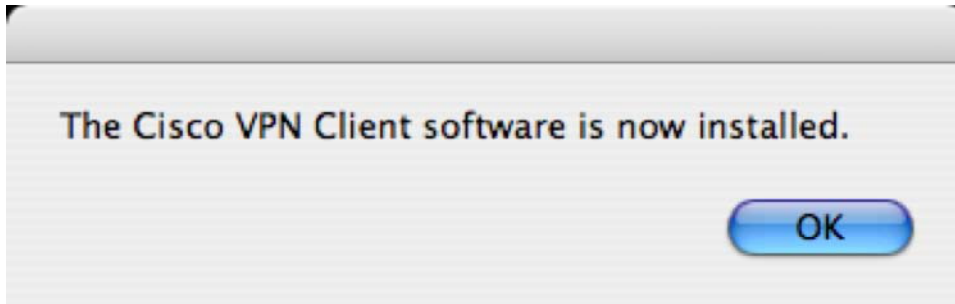

5. Authentication is required to proceed with the software installation. Enter the password that you use to log into your Mac and then click **OK**.

6. A window similar to the one pictured here should appear during installation.

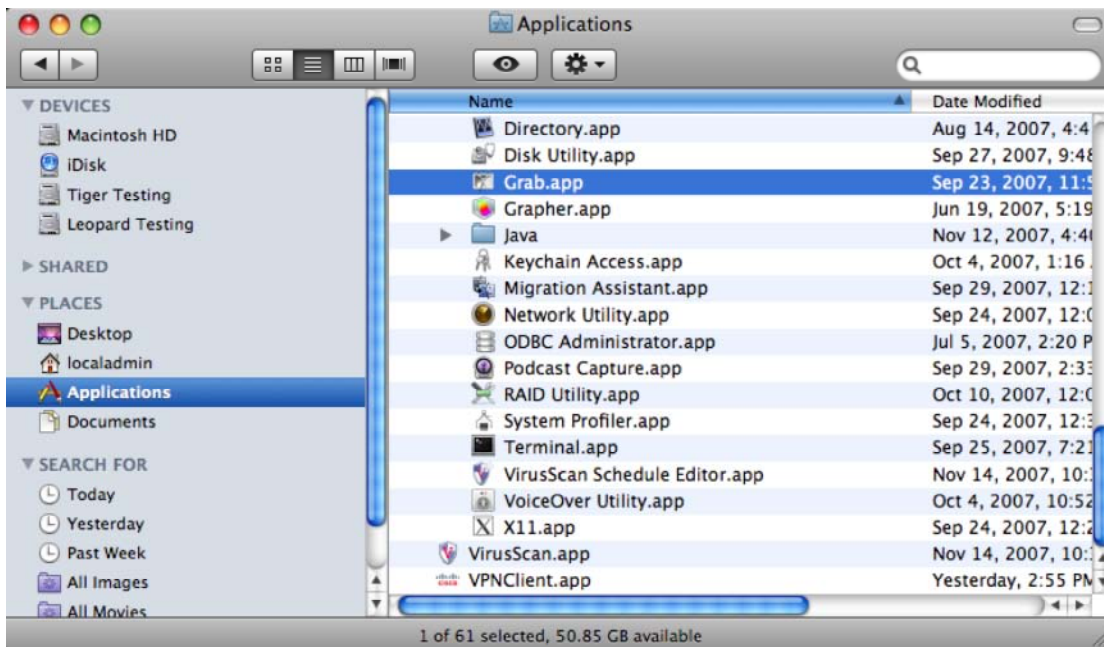

7. When the software is finished installing, you will be presented with a screen as shown here. Click on the **OK** button to complete the installation.

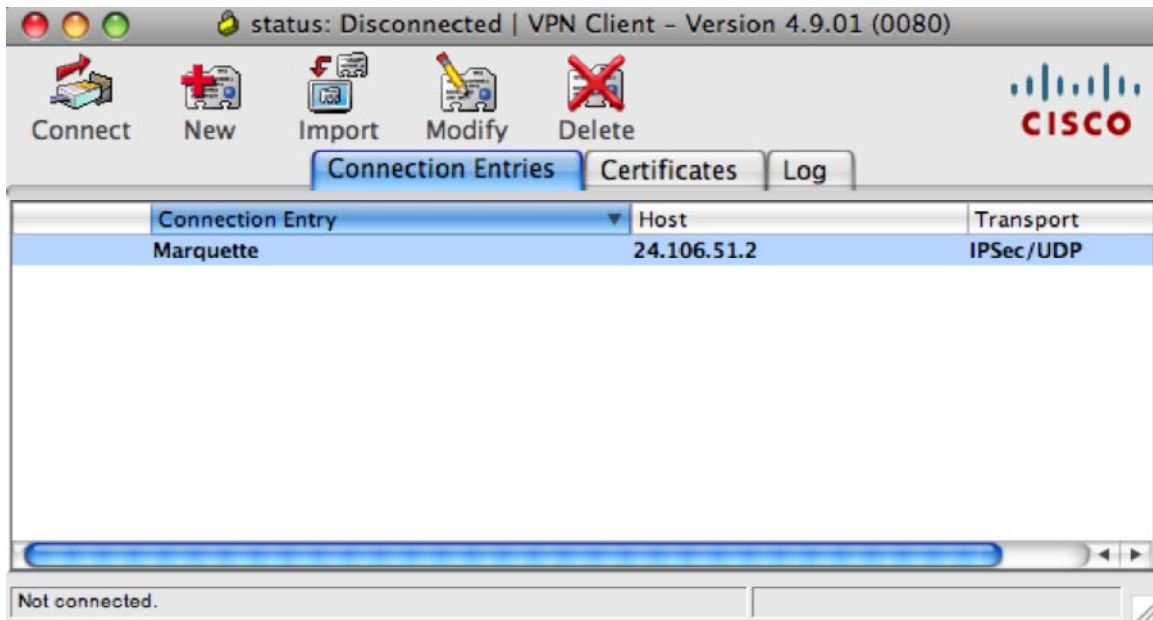

8. Locate the

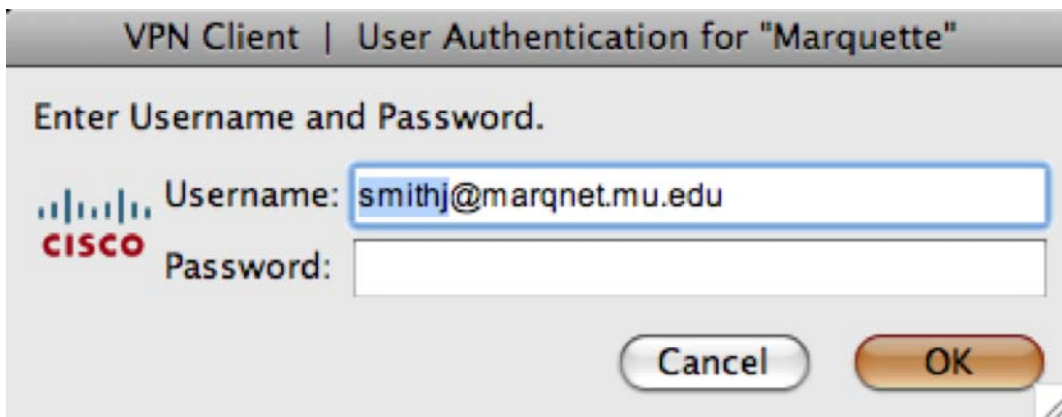

VPNClient.app, located in your Applications folder as shown here. Double-click on the application to launch.

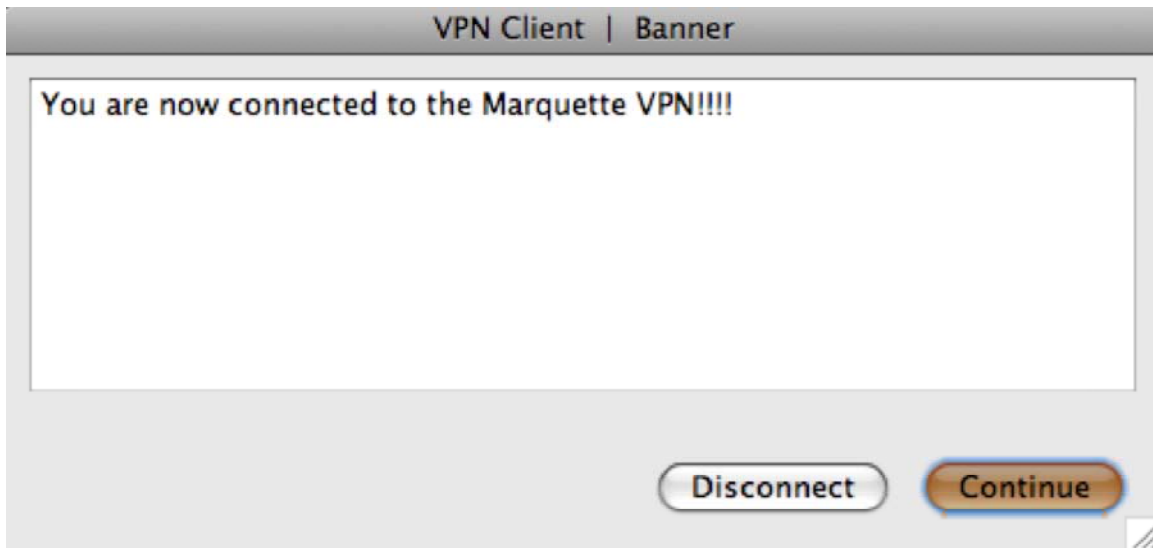

9. When the application launches, you'll be presented with a connection window. Click on the **Connect** icon in the upper left section of the window.

10. When presented with the authentication window, enter your MARQNET (email) username to the left of the “@” symbol, leaving the marqnet.mu.edu as shown. Enter your password and then click **OK**.

11. You are now connected to the Marquette VPN. Click **Continue** to begin working on Marquette’s network.

12. When you are ready to disconnect from the Marquette network, simply click on the **Disconnect** button in the upper left corner of the connection window and then quit the application.
