

Mac OS X configuration for MU_Wireless

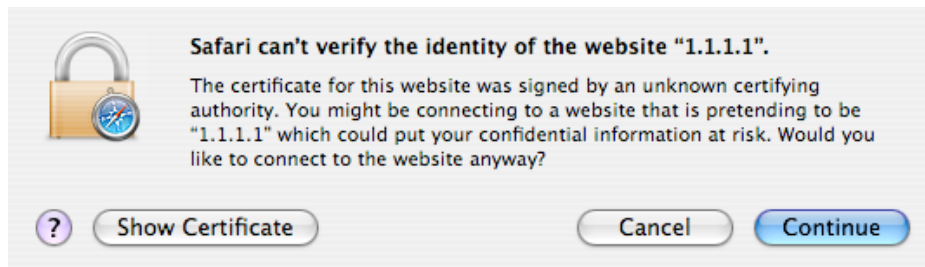

SPECIAL NOTE: MU_Wireless has been tested and approved for Mac OS X versions 10.3 and 10.4.

Connecting to MU_Wireless

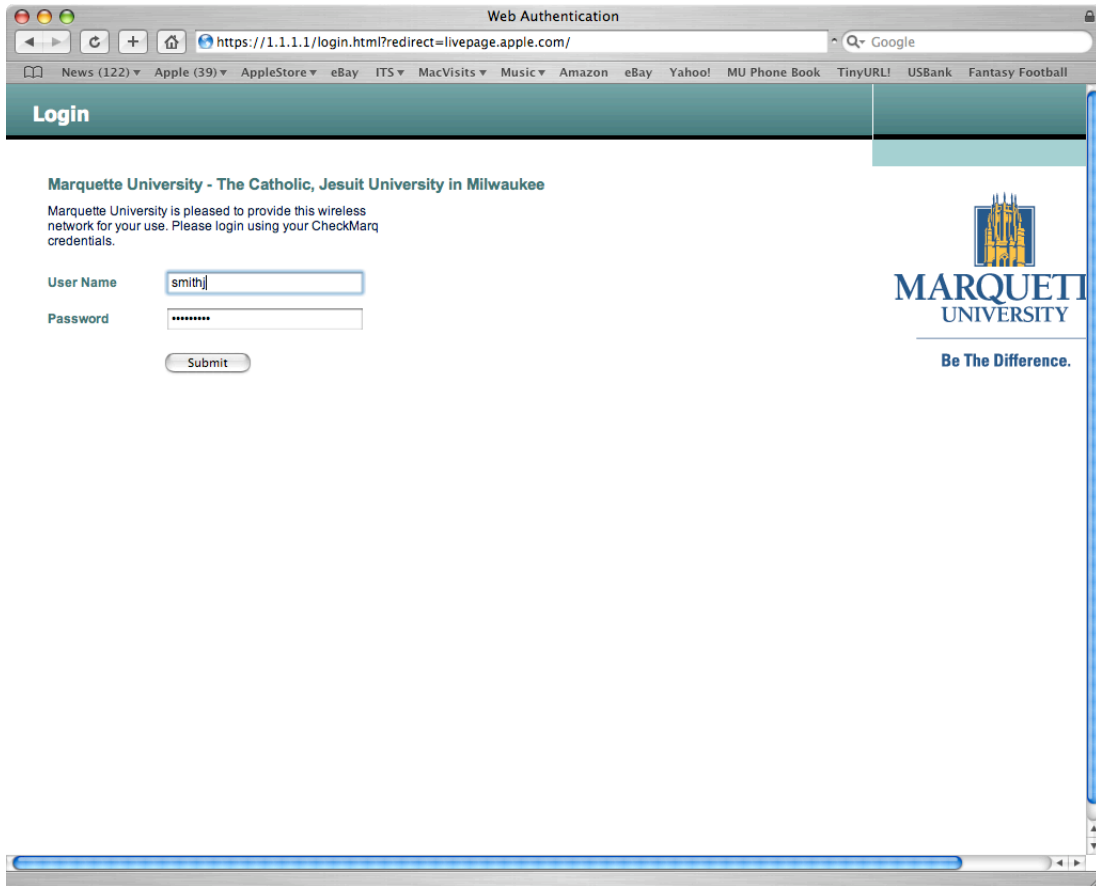

1. Click on the **Airport** menu and select the option for **MU_Wireless**.

2. Launch the **Safari** web browser. After launch, you may receive an alert regarding the identity of the website. Click the **Continue** button to proceed to the **MU_Wireless** login page.

3. When prompted, enter your CheckMarq username and password. Click on the **Submit** button to complete your connection to the wireless network.

4. If Safari popup blocking has been disabled, you may see a special logout window. This window can be used to disconnect from the wireless network. This can be helpful when using a computer shared with several people. To disconnect from the network, click on the **Logout** button. If this window is not available, you can browse to <https://1.1.1.1/logout.html> to reveal the **Logout** button.
