

## Windows VPN Installation/Usage Instructions

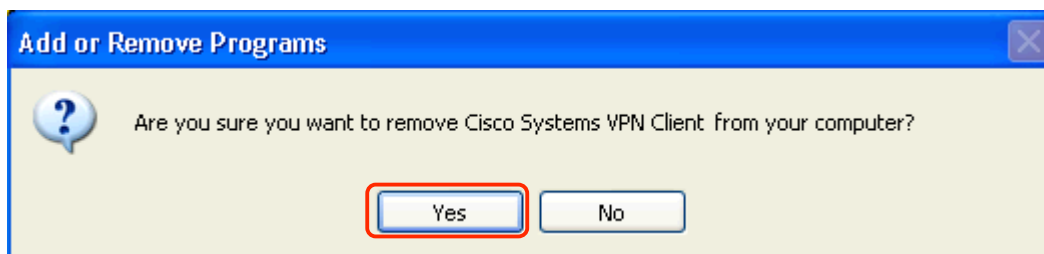

Marquette VPN connects you to online resources restricted to the university campus while you are away from Marquette. The VPN is designed for students, faculty and staff who already have a commercial high-speed Internet service, such as Road Runner. This secure connection from outside of Marquette is called a virtual private network or VPN.

Before installing the latest version of the Cisco VPN client you need to uninstall any older Cisco VPN client.

1. Go to **Start/Control Panel**.
2. Double click on **Add or Remove Programs**.
3. Scroll down the list and look for **Cisco Systems VPN Client**. If **Cisco Systems VPN Client** is found in the list, continue to step 4, otherwise skip to step 7.
4. Click on **Cisco Systems VPN Client** to select it and then click **Remove**.

5. Click on **Yes** when asked if you are sure you want to remove the application.

6. When the uninstall is complete, reboot the computer.

7. Go to <http://www.marquette.edu/its/help/downloads> and click on **Login and download Cisco VPN for Windows**.

**Virtual Private Network (VPN)**

Connect to online resources restricted to campus while you are away from Marquette.

9. When the following window appears, click **OK**.

10. When the **File Download – Security Warning** window appears, click on **Save**.

11. Select **Desktop** in the left margin and then click on **Save**.

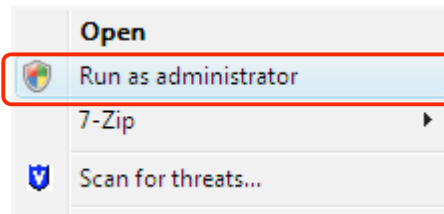

12. After the file is saved, close all open windows. Find the **MU\_VPN\_5\_0\_00\_0340.EXE** file on your Desktop and follow the instructions below which pertain to your operating system.

**Microsoft Windows XP and Windows 2000:**

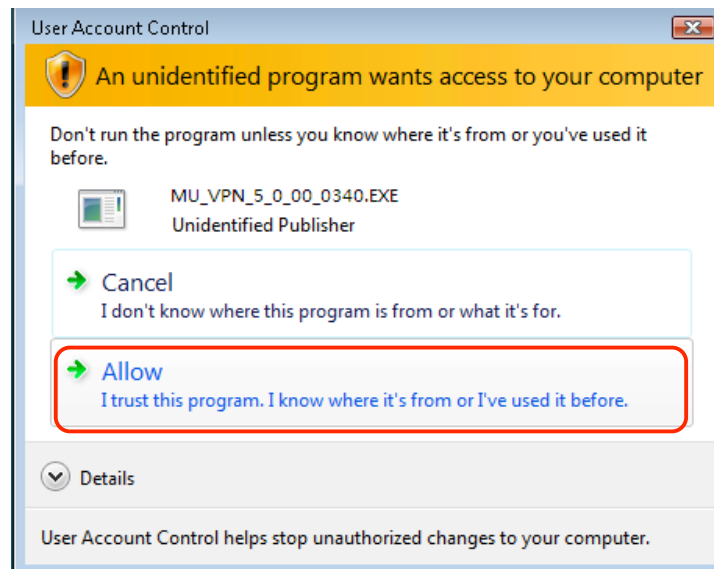

Double click on the file and then proceed to step 13.

**Microsoft Windows Vista:**

Right click on the file and choose **Run as administrator**.

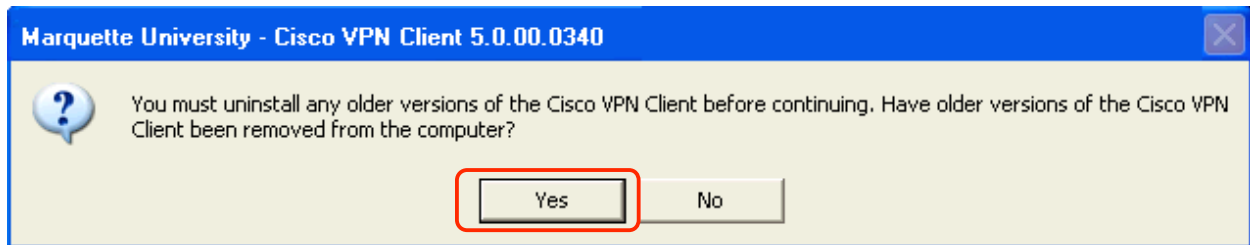

Click on **Allow**.

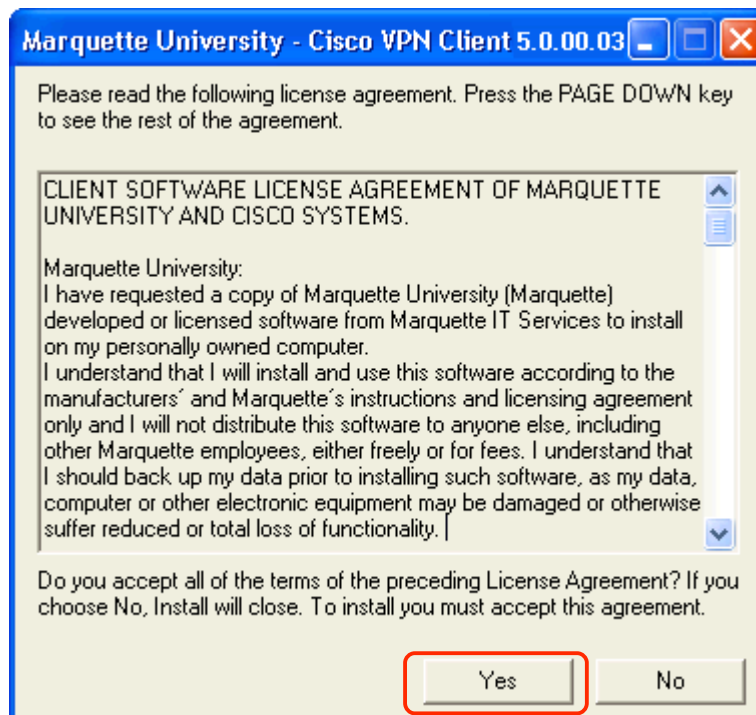

Proceed to step 13.

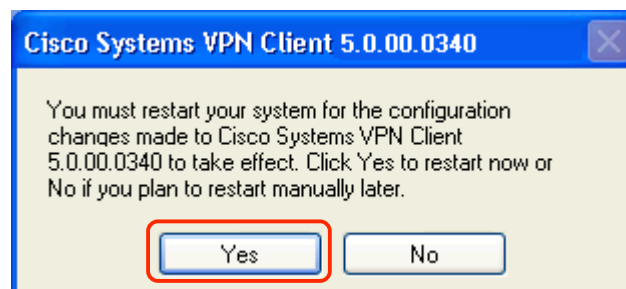

13. Click on **Yes**.

14. Read the license agreement and then click on **Yes**.

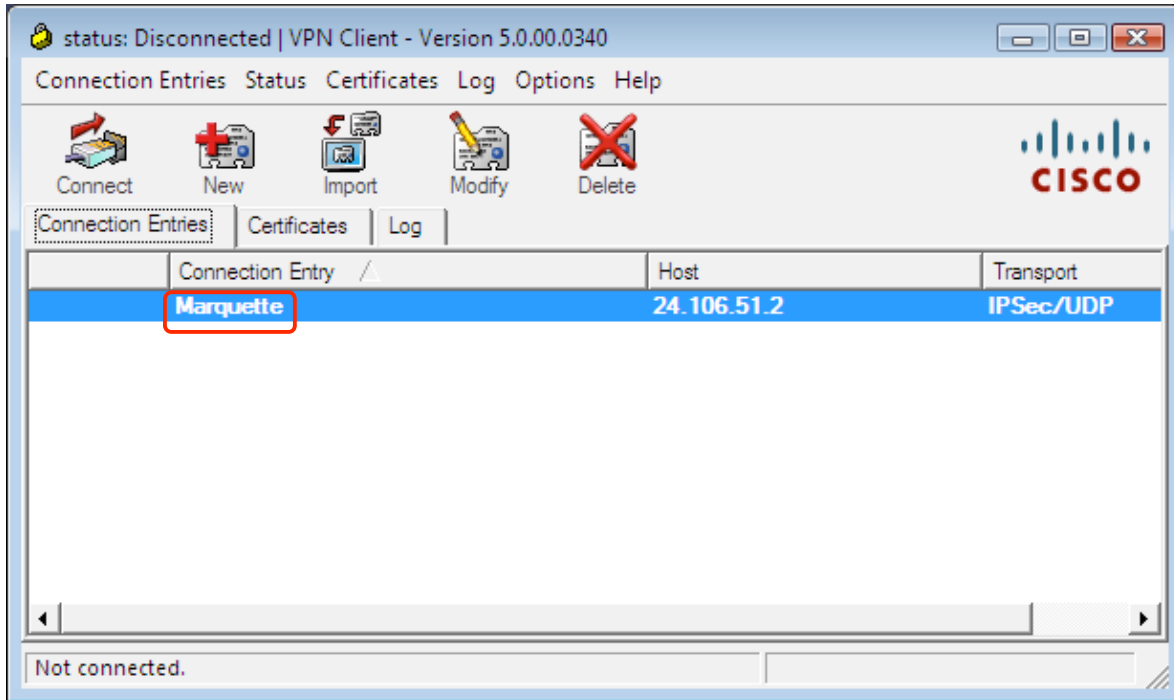

15. Click on **Yes** to restart the computer.

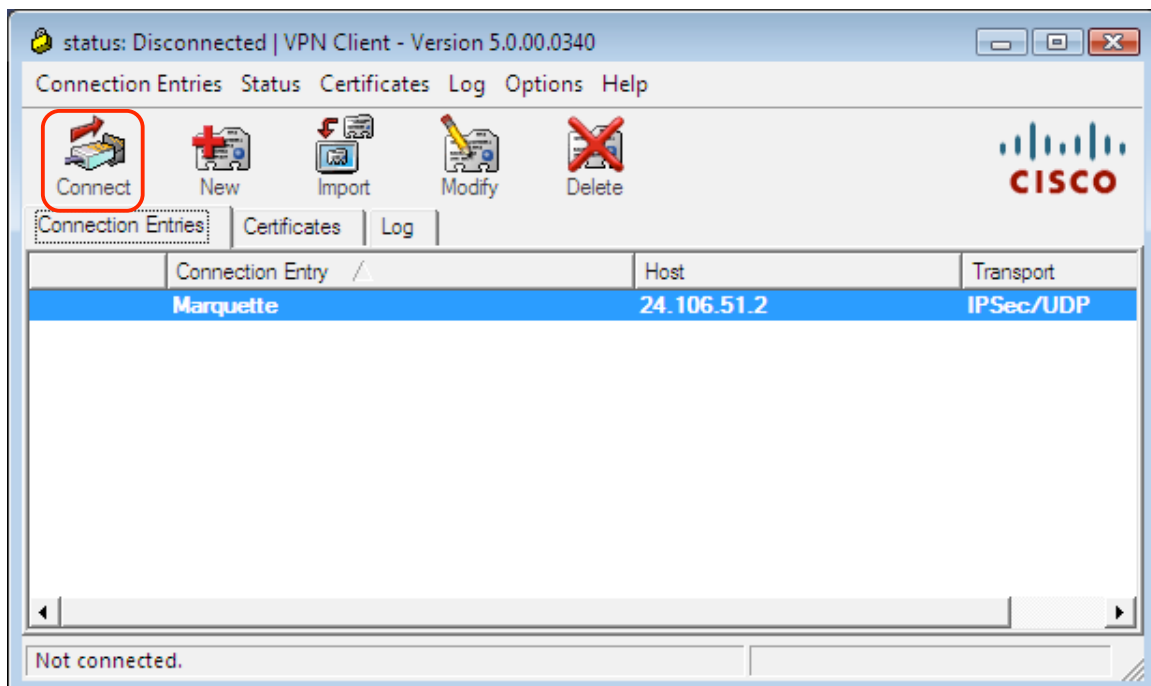

16. Once the computer has restarted go to **Start/All Programs/Cisco Systems VPN/ VPN Client** to start the VPN client.

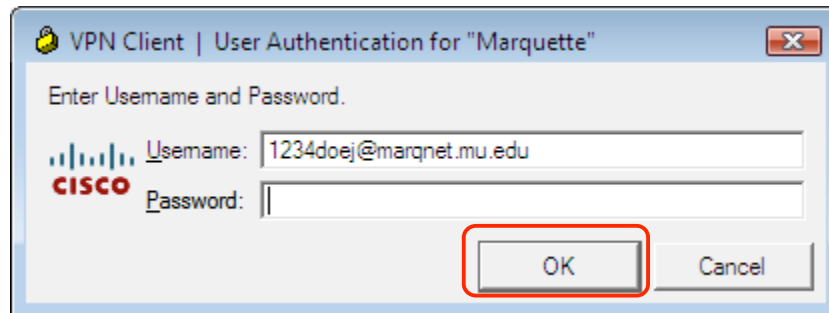

17. Click on **Marquette**.

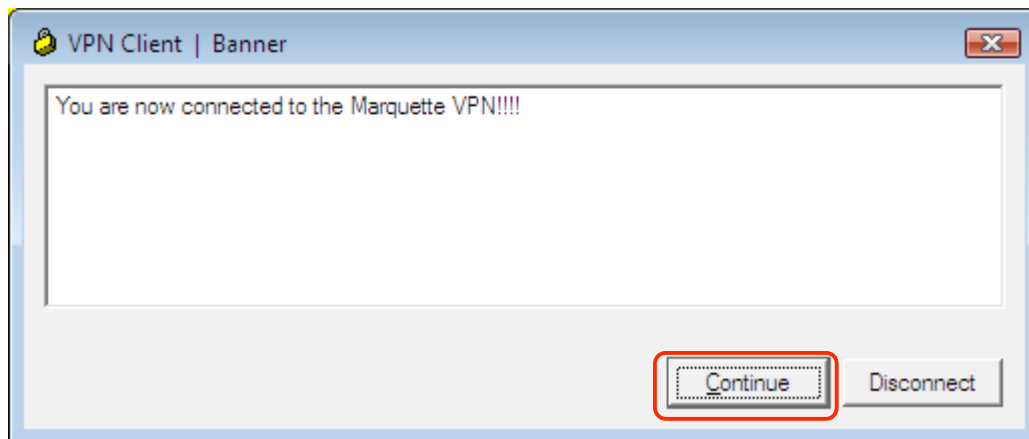

18. Click on **Connect**.

19. Enter your eMarq user name in the format **username@marqnet.mu.edu**. Enter your eMarq password and click on **OK**.

20. Click on **Continue**.

You are now connected.

To disconnect the VPN session when you are finished working, right click on the **VPN Client** system tray icon and select **Disconnect**.
