Please join us Tuesday, March 15th from 6:00-8:00pm at the Medical College of Wisconsin for these talks and other information about your brain.

A Brain Awareness Week Event

YOUR BRAIN: The Facts Behind the Headlines

Milwaukee Chapter of the Society for Neuroscience

March 15, 2011

Surviving a Bullet to the Head
By: Frank Pintar, PhD

Gabrielle Giffords, Congresswoman from Arizona, was shot in the head. She survived the initial trauma, but what has her brain suffered? What is the physics behind a gunshot wound? What are the factors that will determine her long-term recovery from this trauma?

Mental Illness in Our Communities: Lessons from the Tucson Shooting Tragedy
By: Jon Lehrmann, MD

The young man who shot Congresswoman Giffords exhibited many warning signs prior to the shooting. How did the community not see that he was a danger? What can we learn about how to help those with mental illness before tragic events occur?

Imaging at the Speed of Brain with MEG
By: Sylvain Baillet, PhD

The brain is an incredible machine: It can process huge amounts of information at lightning speed. Learn about a new tool that can watch the brain working at the millisecond time scale.

Medical College of Wisconsin
8701 Watertown Plank Road
Milwaukee, WI 53226

Please park in any of the indicated lots. They are all open after 4:00pm for use.
