Contribute Documentation:
Formatting Content

The text toolbar: The text toolbar will help you in modifying text on a page. Just like changing styles, you need to highlight the text you want to modify and select a button from the text toolbar.

Font styles: You can add styles to text by highlighting the text you want changed. Then, go to the styles menu and select which style you want. Please note that certain elements have select styles associated with them. For example, headings on a secondary page have the “Heading 1” style associated with them. Paragraphs have the font style “Normal”.
