2010 Pilot & Collaborative Grants in Clinical and Translational Research

The Clinical and Translational Science Institute (CTSI) seeks applications from new and established investigators for its 2010 Pilot & Collaborative Grants in Clinical and Translational Research.

Important deadlines
Letters of Intent (mandatory) Deadline: September 30, 2010
Application Submission Deadline: October 29, 2010

The fundamental goal of this Request for Application (RFA) is to stimulate translational and clinical research among the institutions that comprise the CTSI of Southeast Wisconsin. It seeks to encourage multi-disciplinary collaboration between clinical and basic biomedical scientists, including social scientists, ethicists, engineers, biostatisticians, informatics specialists, and all members of clinical health care delivery teams. Funds will be provided to: 1) support new and promising clinical and translational projects, including comparative effectiveness and outcomes research; 2) maximize scientific interactions of junior investigators with senior mentors; 3) stimulate collaborative research between bench and clinical investigators within similar thematic areas; 4) foster interdisciplinary, multi-institutional collaborations between and within constituent institutions of the CTSI; 5) support research in translational technologies and their applications; and 6) support research in the specific area of rehabilitation medicine. There is a fundamental expectation that the studies supported by this RFA will generate subsequent extramural funding from NIH, NSF, and/or other similar sources.

Multi-disciplinary and multi-institutional proposals are strongly encouraged. Principal Investigators from any of the CTSI partnering institutions may apply. As an outcome of the recently CTSI-sponsored workshop, a portion of the funding has been set aside for rehabilitation research.

The complete RFA can be found at
