The Marquette-ISM Report on Manufacturing was prepared by Owen Liebelt, a graduate student in Applied Economics at Marquette University, and distributed by Kelly Wesolowski, Associate Director of the Center for Supply Chain Management.

Please direct data questions and requests for media commentary to Manoj Babu.

This report should not be confused with the Report On Business® (PMI®), published by the Institute of Supply Management® (ISM®). While a reasonable attempt has been made to remain consistent with the national report, the contents of this report reflect only information pertinent to the southeast Wisconsin and northern Illinois region. This report is not used in the calculation of the national report.

Summary

<th>August 2020</th>
<th>July 2020</th>
</tr>
</thead>
<tbody>
<tr>
<td>Seasonally adjusted</td>
<td>54.49</td>
<td>51.37</td>
<td>44.90</td>
</tr>
</tbody>
</table>

(Milwaukee, Wisconsin) – September’s Index registered at 54.49, an increase from 51.37 in August. September’s index indicates positive territory.

What respondents are saying in September 2020:

- Pent up demand in some sectors, notably, mining and automotive
- Energy sector is sluggish
- Food industry is continuing to grow, and is expected to continue to grow as COVID cases rise
- Steel production and demand are still on a downward trend
- Transportation lead times are increasing, and capacities have become an issue (truck capacities in the USA are an issue from Chicago and Memphis)
Important: See explanatory notes on the survey and diffusion index at the end of this report.

</table>

(*) The indices are seasonally adjusted except for the Customers' Inventories, Prices, Backlog of Orders, Exports, and Imports Indexes, which do not meet the accepted criteria for seasonal adjustments.

What respondents are saying in September 2020:

- Due to issues with overseas supplier relations, trying to source more supplies domestically (NOTE: Montreal Port strike and Indian Ocean shipping issues)
- Backorders pile up as supplier are having hard times meeting fulfillment schedules
- Using up inventory, we already had in stock due to COVID
- Have not been replacing individuals who were let go due to COVID
- Increased orders from the Middle East Region
Blue and White-Collar Employment:

We have collected input on Blue and White Collar Employment. The indices are below for September 2020, August 2020, and July 2020.

<table>
<thead>
<tr>
<th></th>
<th>Sept-20</th>
<th>Aug-20</th>
<th>Jul-20</th>
<th>Direction</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Blue Collar</td>
<td>53.7</td>
<td>49.7</td>
<td>40.8</td>
<td>growing</td>
<td>-</td>
</tr>
<tr>
<td>White Collar</td>
<td>50.8</td>
<td>45.1</td>
<td>40.8</td>
<td>growing</td>
<td>-</td>
</tr>
</tbody>
</table>

Note: These have been calculated based on the seasonally adjusted (SA) Blue and White Collar indices.

What respondents are saying in September 2020:

- Staff is being maintained and not replaced – difficult with COVID, this is consistent from last month
- Suppliers are continuing to run into supply issues, while certain areas of demand increase

Buying Policy

Average commitment lead-time for Capital Expenditures increased from 94 to 131 days. Average lead-time for Production Materials decreased from 61 to 57 days. Average lead-time for Maintenance, Repair and Operating (MRO) Supplies increased from 25 to 31 days.

Six-Month Outlook on Business Conditions

In this outlook, there is a downward shift in positive expectations compared with July and August in terms of market conditions. Approximately 47% of respondents expect positive conditions, 35% expect conditions to remain the same and 18% of the respondents expect conditions to worsen within the next six months.

Insights on the ISM® PMI® from Institute for Supply Management®:

ISM® Manufacturing Report On Business® Background

In February 1982, the PMI® was developed by the U.S. Department of Commerce (DOC) and ISM. The index, based on analytical work by the DOC, adjusts five components of the Institute’s monthly survey — new orders, production, employment, supplier deliveries and inventories — for normal seasonal variations, applies equal weights to each and then calculates them into a single monthly index number.

An update of research originally done by Theodore S. Torda, the late economist for the DOC, shows a close parallel between growth in real Gross Domestic Product (GDP) and the PMI®. The index can explain about 60 percent of the annual variation in GDP, with a margin of error that averaged ± .48 percent during the last ten years. George McKittrick, an economist at the DOC, said “Not only does the PMI® track well with the overall economy, but the indication provided by ISM data about how widespread changes are, complements analogous government series that show size and direction of change.”

In January 1989, the Supplier Deliveries Index from the Report became a standard element of the DOC’s Bureau of Economic Analysis Index of Leading Economic Indicators. The data was incorporated into the index from June 1976 forward. In January 1996, The Conference Board began compiling this index.

What Is a Diffusion Index?

Diffusion indexes have the properties of leading indicators and are convenient summary measures showing the prevailing direction of change. The percent response to the “Better,” “Same” or “Worse” question is difficult to compare to prior periods. Therefore, the percentages are “diffused” for this purpose. A diffusion index takes those indicating “Better” and half of those indicating “Same” and adds the percentages. This effectively measures the bias toward a positive (above 50 percent) or negative index (below 50 percent). For example, if the response is 20 percent “Better,” 70 percent “Same,” and 10 percent “Worse,” then the diffusion index would be 55 percent (20% + [0.50 x 70%]). The data for each question is converted to a diffusion index and then seasonally adjusted.

For each index, a reading above 50 percent indicates expansion of an index, while a reading below 50 percent indicates it is generally declining. And a reading of 50 percent indicates “no change” from the previous month. Supplier Deliveries is an exception. A Supplier Deliveries Index above 50 percent indicates slower deliveries, and below 50 percent indicates faster deliveries.
