

Career Services Center

What did you receive?

The Career Services Center received two Winix Plasmawave air purifiers and a Dyson Ball vacuum cleaner.

What space(s) did you transform?

We placed one of the air purifiers in the front area of the office and one in our lounge. The area in the front is where students and staff are working and nearby is a sitting area for guests. The other air purifier is located in the staff and employer lounge area. This area is where the staff at times holds meetings, eats lunch and shows on a tour of the office. We also provide this lounge area to employers who are conducting on campus interviews, so they can relax between interview times. In addition, because we do have frequent outside guests, we wanted a high quality, easy to use in tight spaces, vacuum cleaner to clean the interview rooms more thoroughly.

How is it used?

The air purifiers help to provide a cleaner, fresh atmosphere for the students using the Career Services Center, employer guests as well as MU staff. The vacuum is a Dyson Ball which helps to reach areas in the interview rooms and lounge which we want to keep clean for guests.

Please share how this has positively impacted your employees/patients/students etc. both physically and mentally.

Those who tour the office and employer guests comment on their visits how nice our space is. It is nice to have a clean, comfortable atmosphere in an office where many internal and external guests frequent.

Share any feedback you've had.

As noted, we receive compliments on how our space is inviting and clean.

Share why you feel it's important to change the environment in which we work to support wellness.

The Career Services Center is a space that is used by students for counseling sessions, study space, event presentations as well as interviewing. We also have frequent outside employer guests who utilize the interview rooms and lounge to conduct on campus interviewing. It is important to represent both the CSC and MU as caring about the clean atmosphere which is more inviting to all the visit our office. It is also important to the health and well-being of the students and staff with allergies, sensitivities to odors to maintain a well presented office space.
