

# SPORTS MEDICINE

---

Marquette University Medical Clinic (MUMC) provides sports medicine services for students. Sports medicine care includes prevention, care, and rehabilitation of all musculoskeletal injuries (not necessarily related to sports participation) and concussion/head injuries, as well as counseling regarding exercise and participation in physical activity.

We have three staff physicians that have additional training and expertise in sports medicine.

Services and supplies available on site include:

- Splinting and casting for most uncomplicated fractures
- Bracing for treatment and prevention of injuries
- Crutches
- Home rehabilitation plans and referral for physical therapy

Cases often arise when radiology tests are necessary for the diagnosis and management of many sports medicine problems. X-rays for some extremities are available on-site at MUMC. Additional radiology services commonly used in sports medicine can be arranged as needed and MUMC providers will work with you to find accessible facilities that are compatible with your health insurance plan.

Physical therapy (PT) is also available on campus, conveniently located in Cramer Hall. MUMC providers can also provide referrals to other facilities near campus.

Both radiology and physical therapy services will be billed directly to your personal health insurance as they are not covered by the Segregated Health Fee.

For questions or to schedule an appointment, please call (414) 288-7184.
