

BITS AND BYTES

Transactions between specified dates

Suppose you want to generate a report between two dates or for a particular year only. You can gather the details in a query that include the date of some transaction. You include the following as criteria for the date.

BetweenDateQuery2 : Select Query

student

*
studentID
dateofbirth

Field:	studentID	dateofbirth
Table:	student	student
Sort:		
Show:	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Criteria:		>=[Enter Begin Date (MM/DD/YY)] And <=[Enter End Date (MM/DD/YY)]
or:		

This will force ACCESS to prompt you for a “begin” and an “end” date so that only those records that fall between those dates are included. The rest are omitted.

Enter Parameter Value

Enter Begin Date (MM/DD/YY)

OK Cancel

How to calculate AGE given a birthdate?

You want to dynamically create an age for a person so that you do not have to type it every year. Here is the command for the query where dateofbirth is an attribute/field you have.

Age: DateDiff("yyyy",[dateofBirth],Now())+Int(Format(Now(),"mmdd")<Format([dateofBirth],"mmdd"))
